

Free Internet Filtering Option for Wilson Families

Today's families have an array of Internet-connected devices in their homes, from computers to gaming consoles to smart phones. OpenDNS is the only Internet parental controls solution that empowers parents to manage Web access across every device that accesses the Internet on your home network. This includes phones and computers that your kids' friends bring into the house, giving parents peace-of-mind that their kids are protected regardless of how they're accessing the Internet.

This unique functionality makes OpenDNS the single most effective Internet parental controls solution available.

BENEFITS

- Choose the custom Web filtering level that's right for your household
Parents can block entire categories of content, or just choose to block the individual websites that you know are problematic or unsafe for your family. Or, for easier setup, you can choose a filtering level: low, medium or high. The low filtering level blocks just adult content, where the high filtering level blocks adult content, social networking sites, video-sharing sites and more.
- Simple to set up and manage
Setting up OpenDNS parental controls is as easy as making one simple change to your wireless router. Follow our detailed instructions for your wireless router's settings, then choose the content you want to block. OpenDNS takes effect across your entire household immediately – from your family computer to your kids' gaming console.
- A new communication outlet with your kids
OpenDNS helps start a dialogue about Web safety and appropriate use between you and your kids by letting you customize the page your kids see when a website's been blocked. Write a message to them and even add an image to best explain why you've chosen to restrict their access.
- The most trusted and recommended Internet parental controls service
OpenDNS has been recommended by the New York Times, PC World, Cafe Mom and many leading technology publications. Perhaps the most powerful vote of confidence of all, OpenDNS is chosen and trusted by more than 1 in 3 US public schools to keep their kids safe online.
